Guard rail with a bar (assembly required)

Guard rail with a bar in RAL 1003 colour is a reliable solution to be used in production and storing premises, designed with protection and safety in mind. Made with durable materials our guard rail boasts exceptional damage resistance. Intensive yellow colour does not only increase the rail's visibility but also contributes to better marking of danger zones or other places requiring extra attention.

Guard rails we offer are perfect for securing machines, walls, posts or fencing off gangways in warehouses, factories and parking lots as well.

Guard rail with a bar and a metal toe board (assembly required)

Guard rail with a bar and a metal toe board is made of high quality materials. It is equipped with a lower metal part which is an additional protection in the area below the knees. Thanks to this solution a guard rail with a metal toe board is perfect for the areas where there is a higher risk for accidents involving employees' lower limbs or of damaging equipment stored on the floor.

Guard rail with a bar and a wooden toe board (assembly required)

Yellow **guard rail with a bar and a wooden toe board** is an esthetic safety solution dedicated for industrial and storing premises. Apart from standard protection against impact it stands out with a unique feature – its lower segment has been equipped with a wooden toe board. Such solution helps protect legs below the knees from impact and also prevents smaller objects from entering protected areas.

Swing gate on a post 80 / 100cm (assembly required)

Swing gate on a post is an ideal solution dedicated for industrial and storing premises. Its primary characteristic is not only functionality and aesthetic looks but also an advanced renowned **Locinox** closing system. This mechanism, mounted in the upper part of the gate, automatically returns to its original position after opening which significantly rises the safety level preventing the gate from being accidentally left open. **Locinox**

closing mechanism guarantees smooth and problem-free use enabling smooth passage, high safety level and effectivity in a dynamic working environment. **Universal design allows the gate to be left- or right-hand mounted.**
